

A Decade of Trust: How Brooks Rehabilitation Grew With ZeroG

Since 2012, Aretech's ZeroG Gait & Balance System has served as a cornerstone of Brooks Rehabilitation's neurological program in Jacksonville, FL. Their journey is defined by more than just longevity; it is a testament to how far a dedicated team can push the boundaries of patient recovery.

A Legacy of Early Adoption

Brooks was an early adopter, integrating the original ZeroG Version 1 system in 2012, at a time when robotic body-weight support systems were still a new concept in rehabilitation. For their patients recovering from injury, ZeroG quickly became an essential part of their recovery process, and the numbers reflect it. The clinical team has consistently logged over 1,200 hours of ZeroG usage annually, year after year.

Investing in the Next Generation

After a decade of rigorous clinical use with the original system, Brooks moved into its next chapter by upgrading to ZeroG Version 3 in 2021. This transition was a natural evolution for a team that had spent years building their clinical practice and expertise around Aretech's technology.

A Tradition of Excellence

With thousands of hours of clinical experience and over a decade of history, Brooks continues to push the boundaries of recovery. By integrating the ZeroG Version 3 into their program, they are pairing a tenured commitment to patient care with Aretech's evolving technology to maintain a premier standard of rehabilitation.
